DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Robert (US 2005/0061069).

Regarding claim 1 Robert teaches measuring capacitance [0012] or electrical resistance in a tread pattern element 23 of the tire 22, and deducing the height [0025] of the element from an equation relating the capacitance [0121] or resistance to the height.

Regarding claim 2 Robert teaches a measuring capacitance or resistance values effected by an acquisition module said acquisition module being provided within the tire [0111].

Regarding claim 4 Robert teaches the tire is fitted to an automobile vehicle and is mounted on a wheel thereof, the step of measuring capacitance is effected by determining an in-tune frequency of a passive resonance circuit comprising at least one capacitor formed by the tread pattern element and an inductance connected to the capacitor in the tread of the tire using an interrogation circuit mounted on the wheel or on a fixed part of the vehicle close to the wheel [0038] [0039] [0114].

Allowable Subject Matter

 Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The cited prior art does not disclose nor suggest measuring capacitance or resistance in the tread pattern element is effected by remotely energizing the acquisition module with an interrogation module mounted on one of the wheel or a fixed part of the

vehicle close to the wheel, and the method further comprises the step of transmitting to the interrogation circuit the capacitance or resistance measurement acquired by the module through an inductance coupled to the acquisition module.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andre J. Allen whose telephone number is 571-272-2174. The examiner can normally be reached on mon-fri 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on 571-272-2180. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
